General Installation Guide & Product Care - Linear Drain

Installation Guidelines

- Grates, tile inserts, end caps and outlets are to be installed with silicone only.
- Grates aren't to be installed with slurry, glue or any cement-based products.
- Grates are not to have direct contact with cement based or screeded cement products.
- Grates should be installed last after tiling, grouting and cleaning with direct stick of silicone only to waterproofing membrane.
- Silicone must be applied to grates and tile joint- no grout or cement-based products.
- Tiles used for tile inserts must be stuck into the body area with silicon only.
- Maintain with your everyday household cleaning products, do not use commercial grade or acid-based products for cleaning. Use a soft cloth for wiping.
- Do not leave any metal objects, cement, cement-based products on the grates as this will cause discolouration and rust.

Product Care

Warm water is the recommended method of cleaning. Alternatively, a mild detergent or multi-purpose cleaner can be used, along with a soft bristle brush/nylon cloth. All detergents must be cleaned off with water after use. Excessive force must never be used to remove stubborn marks. No abrasive or harsh chemicals, such as acidic or alkaline products should be used on or near the grates
